

Hospital Communications

Hospitals around the globe look to STENTOFON® for effective internal communications. When it comes to choosing a communication system for these demanding environments, systems must be judged for speed of call, communication clarity, ease of use and reliability. And when compared to a standard telephone system, nothing is faster than intercom.

The STENTOFON System offers internal communications, overhead paging, public address, group calls and alarm distribution. The new AlphaComE system provides VoIP while maintaining the rich features and flexibility AlphaCom is known for. These features allow a hospital to customize its communications for specific requirements and needs.

When communication is critical, look to the STENTOFON brand, the brand hospitals depend on.

Requirements:

- Internal communications
 - Office/Administrative
 - Surgery
 - Radiology
 - Laboratory
 - Emergency
- Group Call/All Call announcements
 - Page/Reply function
- Overhead paging/public address
- Zone paging
- Alarm distribution

Features/Functions:

- Immediate access to those called
- Instant page/reply by dialing code on intercom
- Line fault indication
- Simple to use and operate
- Crystal clear voice reproduction
- Hands free operation
- Easy programmable features & functions
- Back-up to telephone
- Custom design to meet requirements
- ADA compliant
- Variety of wall/desk stations

AlphaCom E Hospital Solution

The new STENTOFON® AlphaCom E offers the latest in effective hospital communications. VoIP technology allows the AlphaCom system to perform seamlessly over a hospital's network.

The system works by communicating with other AlphaComs via standard Internet Protocol (IP). In many of today's hospitals, it is required that intercom systems work seamlessly on a LAN/WAN. AlphaCom E is designed to meet those needs and much more.

Benefits of AlphaCom E:

- Backwards compatibility
- Critical communications
- Shared infrastructure
- Networking; AlphaNet, SIP
- Modular architecture
- Remote programming and maintenance
- Enhanced integration
- New services
- Built in firewall for enhanced security
- Redundant routes to single destination

Operating Room Master Station

The STENTOFON® Operating Room Master is a flush mount station designed specifically for a hospital's operating room. The OR master can be wiped down or sprayed for ease of sterilization. Pre-programmed buttons provide instant contact with labs and radiology. The station allows for loudspeaking hands-free communication from any location in the OR.

- Hygienic Mylar covered faceplate
- Easily cleaned and sterilized
- Crystal clear communication
- Hands-free intercom
- Ultra sensitive electret microphone
- Access to all system features
