94570 - Subscriber Cable

96580 - Connection Cable

96570 - Connection Block

Description

94570 Subscriber Cable

This cable provides an interface between the IDC connectors on the back of the 9400 module and the field wiring. One cable can be used for 10 substations if you are using 25 V substations with call in or 9600 substations with LEDs. If you are using 9600 two wire substations without LEDs the cable will connect 20 of the devices.

96580 Connection Cable

This cable will allow connection between the 94570 connection cable on the 9400 with the field wiring. It is 20 foot long and has a male "Amp Champ" type connector on one end and is blunt cut on the other end.

96570 Connection Block

This is a "66" type block with 6 common connections across. It allows connecting the 96580 cable with the field wiring.
